International Air Quality Class Standards

ISO 8573-1: 2010 Air Quality Standard

ISO 8573-1: 2010, the international standard for compressed air quality, defines the amount of contamination permissible in compressed air.

The ISO standard identifies three primary forms of contamination in compressed air systems – solid particles, water and oil. Contaminants are classified and assigned a quality class, ranging from Class 0, the highest purity level, to Class 6, the most relaxed.

HPR and HPRN series refrigerated air dryers offer the perfect balance between technology and simplicity to dry compressed air systems to ISO 8573-1: 2010 Air Quality Class 4 to 5 – pressure dew points.

Option Pre-Filtration

NGF series – PF grade filtration – removes solid and oil contaminants from the air stream before entering the dryer.

ISO Air Quality Class:

- Solids – Class 2
- Remaining Oil – Class 4
- Removes solids 1.0 micron and larger
- Remaining oil content 2.0. mg/m³

Option After-Filtration

NGF series – HF grade filtration – provides high efficiency oil removal protecting downstream equipment .

ISO Air Quality Class:

- Solids – Class 1
- Remaining Oil – Class 1
- Removes 99.999+% of solids \geq 0.01 micron
- Remaining oil content < 0.01 mg/m³

For your convenience, pre-configured filter packs, including NGF Series filtration, available for all models.

¹ 1 = For Filter Pack model, add "-FP" to standard model number. (Example: HPRN75-FP)
Dimensions, weights, and inlet/outlet connections are dryer only and do not include filtration.
Filtration package shipped loose, additional fittings may be required.

² Rated Flow Capacity – Conditions for rating dryers are in accordance with ISO 7183 (Option A2).
Compressed air at dryer inlet: 100 psig (6.7 barg) and 100 °F (38 °C);
ambient air temperature: 100 °F (38 °C); operating on 60 Hz power supply.

³ Available in water cooled
At rated conditions, pressure drop is less than 5 psig.

Capacity Correction Factors

To adjust the dryer capacity for non-standard conditions, use the Capacity Correction Factors (multipliers) from Tables 1 & 2.

Sizing Example:

What is the capacity of an HPRN100 at 100°F inlet air temperature, 150 psig working pressure, and 110°F ambient air temperature?

Answer:

100 scfm (rated flow from product specification table) × 1.08 (correction factor for inlet air temperature, Table 1) × 0.94 (correction factor for ambient air temperature, Table 2) = 102 scfm

Table 1 - Capacity Correction Factors
