FLX Series: Smart, Efficient Design

The Hankison FLX Series refrigerated dryers offer an energy-efficient solution for air compression systems, removing moisture and preventing liquid contamination in compressed air. These dryers are engineered to adjust their energy consumption in line with the air demand, ensuring cost-effective operation. By incorporating the most recent developments in heat transfer technology, the FLX Series provides a cutting-edge and efficient method for keeping compressed air dry and clean.

1. Stainless steel brazed plate 3-in-1 heat exchanger (patent pending), with phase change material reservoir

- The PCM thermal reservoir operates at a precise temperature to deliver a stable pressure dew point.
- Smooth, non-fouling stainless steel surfaces promote low resistance to flow, optimizing air system efficiency

2. No-air-loss, demand drain efficiently removes condensate without loss of compressed air

- Condensate drain lines terminate at discharge connections conveniently located on the dryer
- Failure to discharge alarm on the operator interface enhances system reliability

3. High efficiency, water-cooled condenser

4. Reliable, semi-hermetic refrigerant compressors

- Environmentally friendly, globally accepted refrigerants
- Rugged design, for long-term operation

5. Moisture Separator

- Stainless steel mesh design for the highest separation rates, independent of the flow, volume and speed

6. Controller with LCD display provides ease of monitoring and operating status

- Energy saving (%), dryer operating time, refrigeration compressor operating time, active fault message dew point status, and USB connection port to download operating data and upgrade firmware
- Remote monitoring capability – RS485 communications port

Pre-Filtration Option:

HF series – Grade 5 High Efficiency Oil Removal filtration – removes solid and oil contaminants from the air stream before entering the dryer.

ISO Air Quality Class:

- Solids – Class 1
- Remaining Oil – Class 1
- Removes solids 0.01 micron and larger
- Remaining oil content .008 ppm/w

HF Series Filter

Capacity Correction Factors

To adjust the dryer capacity for non-standard conditions, use the Capacity Correction Factors (multipliers) from Tables 1, 2 and 3.

Table 1: Inlet Air Pressure

Inlet Air Pressure	75 PSIG 5.2 BAR	100 PSIG 6.9 BAR	120 PSIG 8.3 BAR	150 PSIG 10.3 BAR	225 PSIG 15.5 BAR
Multiplier	0.86	1.00	1.04	1.09	1.15

Table 2: Inlet Air Temperature

Inlet Air Temperature	80°F/27°C	90°F/32°C	100°F/38°C	110°F/43°C	120°F/49°C
Multiplier	1.46	1.23	1.00	0.82	0.68

Table 3: Ambient Air Temperature

Ambient Air Temperature	80°F/27°C	90°F/32°C	100°F/38°C	110°F/43°C	120°F/49°C
Multiplier	1.12	1.06	1.00	0.83	0.68

Refrigerated Compressed Air Dryers **FLX Series**

3,000 – 12,000 scfm (5,098 to 20,388 m³/h)
